The image displays two screenshots of a Visual Studio Code editor interface, showing the development of a MERN stack application. The top screenshot shows the file explorer on the left, highlighting the 'index.js' file in the 'cms/users' directory. The main editor area shows the initial setup of the 'index.js' file, with a single line of code: `export { default } from '@components/cms/users/index';`. The bottom screenshot shows the implementation of the 'MUsers' component in 'index.js'. The code includes imports for React, useState, useEffect, and various UI components like Modal, Alert, Skeleton, and UserTable. The component function 'MUsers' is defined, using useState to manage 'users' and 'loading' states, and useEffect to fetch data from the 'GET_ALL_USERS' endpoint. The JSX returns a container with a heading, a button to open a modal, and a conditional rendering of a skeleton or alert message based on the 'loading' state and the length of the 'users' array.

```
1 'use client';
2 import React, { useEffect, useState } from 'react';
3 import { openModal } from '@components/ui/modals';
4 import { Alert } from '@components/ui/alerts';
5 import { Skeleton } from '@components/ui/loading';
6 import { GET_ALL_USERS } from '@components/apis/UserServices';
7 import UserTable from './components/tabledata';
8 import UserForm from './components/form';
9
10 export default function MUsers() {
11   const [users, setUsers] = useState({ loading: false, data: [], message: '' });
12   const reload = async () => {
13     setUsers({ loading: true, data: [], message: '' });
14     const res = await GET_ALL_USERS();
15     setUsers(res);
16   };
17   useEffect(() => { reload(); }, []);
18   return (
19     <div className="container-fluid">
20       <div className="d-flex justify-content-between mb-4">
21         <h2><i className="bi bi-people me-2"></i>Users Management</h2>
22         <button className="btn btn-primary" onClick={() => openModal({ message: <UserForm reload={reload} /> , size: 'lg'})}>
23           <i className="bi bi-plus-circle"></i> Add User
24         </button>
25       </div>
26       {users.loading ? <Skeleton /> :
27       users.message ? <Alert message={users.message} variant="danger" /> :
28       users.data.length > 0 ? <UserTable data={users.data} reload={reload} /> : <p>No users found.</p>
29     }
30   </div>
31 );
32 }
33
```

```
1 import { RequestAPI } from '@/hooks/RequestAPI';
2 const API_URL = process.env.NEXT_PUBLIC_BACKEND_URI;
3 const getToken = () => localStorage.getItem('accessToken');
4 const headers = () => ({ Authorization: `Bearer ${getToken()}`, 'Content-Type': 'application/json' });
5
6 export const GET_ALL_USERS = () => RequestAPI('GET', `${API_URL}/api/users`, headers());
7 export const GET_USER_BY_ID = (id) => RequestAPI('GET', `${API_URL}/api/users/${id}`, headers());
8 export const CREATE_USER = (payload) => RequestAPI('POST', `${API_URL}/api/users/register`, headers(), payload);
9 export const UPDATE_USER = (id, payload) => RequestAPI('PUT', `${API_URL}/api/users/${id}`, headers(), payload);
10 export const DELETE_USER = (id) => RequestAPI('DELETE', `${API_URL}/api/users/${id}`, headers());
```

```
1 'use client';
2 import { useState, useEffect } from 'react';
3 import { useRouter } from 'next/navigation';
4 import Link from 'next/link';
5 import axios from 'axios';
6 import { useAuth } from '@/contexts/AuthContext';
7 import { TextInput } from '@components/ui/forms';
8
9 export default function SignInPage() {
10   const router = useRouter();
11   const { login, user, loading: authLoading } = useAuth();
12   const [form, setForm] = useState({ email: '', password: '' });
13   const [error, setError] = useState('');
14   const [submitting, setSubmitting] = useState(false);
15
16   useEffect(() => {
17     if (!authLoading && user) {
18       router.push('/cms');
19     }
20   }, [user, authLoading, router]);
21
22   const handleSubmit = async e => {
23     e.preventDefault();
24     if (!form.email || !form.password) return setError('Email and password required');
25     setSubmitting(true);
26     try {
27       const res = await axios.post(`${process.env.NEXT_PUBLIC_BACKEND_URI}/api/users/login`, form);
28       if (res.data.success) {
29         await login(res.data.data, res.data.accessToken, res.data.expiresIn);
30         const redirect = sessionStorage.getItem('redirectAfterLogin') || '/cms';
31         sessionStorage.removeItem('redirectAfterLogin');
32         router.push(redirect);
33       }
34     } catch {
35       setError('Login failed');
36     }
37     setSubmitting(false);
38   };
39 }
```
